

AVISH T S

AI Engineer

Contact

- +91 7338679989
- avishts18@gmail.com
- Bengaluru, India

Education

- REVA University (RACE)**
M.Tech in Artificial Intelligence
2025 - Present | Bengaluru
- Sri Siddhartha Institute of Technology**
B.E in Computer Science
2020 - 2024 | Tumakuru

Skills

- Generative AI & NLP**
Hugging Face Transformers, OpenAI / Gemini APIs, Retrieval-Augmented Generation, Text Summarization, Agentic AI
- Programming Languages**
Python, SQL, JavaScript, TypeScript, HTML5, CSS3
- Data Science & ML**
NumPy, Pandas, Scikit-Learn, Matplotlib, Seaborn, EDA, Predictive Modeling, Power BI
- Frameworks & Tools**
Flask, Gradio, Streamlit, React.js, Node.js, Tailwind CSS, MySQL Workbench, Excel, Flutter
- Soft Skills**
Problem Solving, Agile Development, Technical Documentation, Adaptability

Certifications

- Generative AI Fundamentals - Databricks
- Machine Learning with Python - Coursera
- Python Programming & Time Management – Infosys SpringBoard
- Data Analytics using Python – IBM SkillsBuild
- Front-End Web Development - Forage

Profile

AI Software Engineer with a strong command over Python, SQL, and predictive analytics with hands-on experience in model building, data visualization, and API integration. Adept in data preprocessing, feature engineering, model deployment, and translating data insights into strategic business decisions. Passionate about applying AI and analytics to solve real-world challenges.

Work Experience

- Jr. Software Engineer | Intern** Feb 2025 - May 2025
TechnoNova Private Limited
 - Developed Angular, .NET API, and SQL Server full-stack modules.
 - Automated vehicle inspection workflows using stored procedures and optimized queries.
 - Built Android Java and Windows Forms tools for transport database management.
 - Integrated Vanna AI with LLMs for predictive operational insights.

Projects

- Chat with PDF**
Streamlit + RAG
Built a Streamlit app that lets users upload PDFs and ask contextual questions using Retrieval-Augmented Generation. Implemented document chunking, embeddings, semantic retrieval, and LLM-based answers for faster document understanding.

- RACEOne**
Full-stack Web App
Developed a full-stack platform to streamline capstone project management for RACE administrators and students. Supported project submission, tracking, review workflows, and organized communication between students and coordinators.

- Customer Churn Prediction**
Machine Learning
Built churn prediction models using Logistic Regression, Random Forest, and XGBoost. Performed feature engineering, model comparison, and evaluation with ROC-AUC and F1-score to identify high-risk customers and support retention decisions.

- Image Caption Generator**
Deep Learning
Created a CNN + RNN pipeline to extract visual features and generate natural-language image captions. Worked with image preprocessing, sequence modeling, embeddings, and caption generation for deep learning practice.

- Sentiment Analysis using LSTM**
NLP Classification
Trained an LSTM model on the IMDB dataset to classify movie reviews as positive or negative. Applied tokenization, sequence padding, embedding layers, training validation, and performance analysis.
