- ayeesha0442@gmail.com
- Bangalore

Education

REVA University (RACE)

M.Tech in CyberSecurity
2025 - 2027

REVA University

B.Tech in Information Technology
2021 - 2025

Skills

- Programming Skills: Python
- Network Traffic Analysis and Log Analysis
- Tools: VS Code, Arduino IDE, Cisco Packet Tracer, Playwright, Grafana, Figma, Spline, Wireshark, Telemetry, Power BI
- Strong Communication
- Team Management
- Teamwork

Certifications

- Python for Data Science
- Cybersecurity Interpret Phishing Simulation
- Space Science and Technology - ISRO
- AGNIRVA Space Technology and Artificial Intelligence - ISRO
- Generative AI by Google Cloud
- Networking Basics- CISCO Networking Academy
- Power BI in Data Analytics
- Encryption and Quantum-Safe Techniques

About Me

Aspiring cybersecurity with a background in computer engineering. Strong analytical skills and a keen interest in AI based security solutions. Known for being reliable, analytical, and goal oriented eager to learn, grow, and contribute to real world cybersecurity challenges

Work Experience

Automation Engineer Intern

Oct 2024 - Nov 2025

L&T Technology Services

Worked on AI-driven automation features including automated test script generation, reusable testing components, and DevOps pipeline integration to improve testing efficiency and accuracy. Contributed to live dashboards with custom analytics for test performance tracking and applied AI/ML techniques for defect classification and prioritization, enabling faster debugging and improved issue resolution through cross-functional collaboration.

Projects

Network Anomaly Detection for Cyber Threat Identification Using Artificial Intelligence

Uses unsupervised machine learning techniques to identify unusual network behavior that may indicate cyber- attacks, such as intrusions or abnormal traffic patterns. By analyzing network data without labeled samples, the system enhances early threat detection and supports proactive network security monitoring.

Home Automation System (NodeMCU and WIFI-relays)

Designed and deployed a smart home automation system using NodeMCU (ESP8266) and Wi-Fi relay modules for remote appliance control via mobile apps, web interfaces, and voice assistants. Integrated secure authentication, real-time monitoring, and sensor-based environmental tracking to deliver a scalable and reliable automation solution.

Improving Disease Diagnosis and Prediction Precision using Machine Learning in Genomic Data Analysis

Used a machine learning-based framework to improve the diagnosis and prediction accuracy of Alzheimer's disease and brain cancer using large genomic datasets. Integrated DRAGEN for fast and accurate genomic data processing with BA-TLBO for optimized feature selection and model tuning, enabling an efficient pipeline that supports precision and personalized medicine.
