

DATTAGURU CHETTIAR

Cybersecurity Engineer

Contact

+91 9004230088

gurudatta229028@gmail.com

Bengaluru, India

Education

REVA University (RACE)

M.Sc. in Cyber Security
Nov 2025 - Nov 2027

REVA University

B.Sc. in Information Technology
Sep 2022 - Sep 2025

Skills

Cybersecurity & Networking

Network Packet Analysis, Network Fundamentals, Vulnerability assessment & Penetration testing, API Security Testing, HTML, CSS, Linux, Windows, IoT Fundamentals

Soft Skills

Quick learner, Teamwork, Problem Solving, Critical Thinking

Tools

Nmap, Burpuite, Wireshark, Metasploit, Sqlmap, John the ripper, subfinder, Dirb, Nessus, Hydra, Wazuh.

Certificates

Certified Ethical Hacker (EC Council)

Networking Basics (Cisco)

Python 101 for Data Science(IBM)

About Me

Security-focused individual with hands-on experience in network packet analysis, alert investigation, and vulnerability assessment. Skilled in using tools like Wireshark, Wazuh, Nmap, and Nessus, with knowledge of SIEM concepts and incident response processes. Experienced in developing a Python-based API security testing tool and committed to strengthening security operations through continuous learning and practical application.

Projects

Jan 2025 - Jun 2025

API Security Testing & Vulnerability Scanner

Personal Project

Developing a Python-based automated API vulnerability scanner capable of testing multiple REST endpoints for authentication bypass, TLS/HTTPS enforcement, rate limiting, and sensitive data exposure. Adding support for JWT token-based authentication and integrating JSON/HTML report generation for audit and documentation. Building a FastAPI-based local test environment to simulate both public and secure endpoints for realistic testing scenarios.

Firewall:GUI-Based-Firewall-Linux

Personal Project

Develop a user-friendly GUI application that allows users to create and manage firewall rules easily without using command-line tools. Simulate network traffic control by enabling users to define rules based on IP address, port number, protocol, and action (ACCEPT, DROP, REJECT). Implement rule management and validation, allowing users to add, delete, reorder rules and ensure correct inputs to avoid configuration errors.

ControApp: Group Expense Management System

Personal Project

Manage group expenses easily by allowing users to create groups (Contro), add members, and store all expense details in one place. Automatically split expenses and track payments by dividing the total amount among members and showing who has paid and who is pending. Send reminders to pending members by notifying them (via WhatsApp/Message) to complete their payments on time.

Home Automation System (Raspberry Pi)

Personal Project

Designed and deployed a smart home automation platform allowing remote device control and sensor monitoring via a browser-based dashboard. Achieved reliable device communication through GPIO control and logged environmental data for analytics. System supports user authentication and automatic device triggers based on sensor thresholds. Implemented device control using GPIO pins on Raspberry Pi to manage appliances such as lights, fans, and sensors
