

Janhvi J Revankar

Cybersecurity Engineer

✉ revankarjanhvi@gmail.com ☎ 7483790438  Janhvi Revankar  Janhvi Revankar

Profile

Cybersecurity enthusiast with a background in Electronics and Communication Engineering, possessing good analytical skills and hands-on experience in email security analysis, threat detection, and network vulnerability assessment. Seeking a cybersecurity engineer role to contribute to secure system design, threat mitigation, and continuous security improvement.

Education

M.Tech in Cybersecurity

Nov 2025 – Nov 2027

REVA Academy For Corporate Excellence,
REVA University, Bengaluru, India

B.E in Electronics and Communications

Dec 2021 – May 2025

Government Engineering College, Karwar
CGPA-8.71

Work Experience

VLSI Design Intern

Sep 2024 – Feb 2025

Rooman Technologies Pvt. Ltd

- Gained hands-on experience in RTL coding, simulation, and verification of digital circuits using Verilog, contributing to functional validation and timing analysis.
- Worked on the complete ASIC design flow from RTL to GDSII, performing synthesis using Yosys and analyzing netlists for logic and area optimization.
- Utilized OpenROAD for place and route implementation and KLayout for layout visualization and basic physical verification.

Skills

Technical Skills

Fundamentals of Network security, Email security analysis, Log analysis, IoT security, Python, SQL, Data visualization, Digital Electronics, Verilog HDL.

Tools

Autopsy, Nmap, Wireshark, Wazuh, MySQL Workbench, Arduino IDE, Cadence Xcelium.

Projects

Email Phishing Detection System and Analysis Tool

- Developed a Python-based phishing detection tool using rule-based threat indicators, performing detailed email header analysis to detect spoofing, reply-to manipulation, and suspicious domains.
- Applied regular expressions to identify phishing patterns, credential harvesting attempts, and malicious payload references within email content.
- Parsed .eml artifacts to validate metadata integrity and generate structured outputs supporting incident response and phishing investigation workflows.

Automated Network Vulnerability Scanner

- Developed a Python-based automated network scanning tool for security assessment, performing host discovery and TCP port scanning to identify exposed services.
- Integrated Nmap for service enumeration and preliminary vulnerability identification, analyzing results to detect misconfigurations and potential attack vectors.
- Generated structured scan reports to support incident investigation, threat hunting, and attack surface visibility.

Secure IoT-Based 3D Printer Emulator with defense mechanisms

- Developed an ESP32-based secure WiFi-enabled 3D printer emulator simulating real-time G-code communication.
- Demonstrated cybersecurity vulnerabilities including unauthorized access, command injection, and denial-of-service (DoS) attacks.
- Implemented TLS-based encrypted communication, authentication, and rate limiting to enhance system security.
- Designed input validation and command whitelisting mechanisms to prevent malicious G-code execution and ensure safe operation.

An optimized design of delay and energy-efficient Booth multiplier [↗](#)

- Designed a high-speed and power-efficient Booth multiplier using hybrid Radix-4 encoding.
- Optimized logic architecture to reduce critical path delay and power consumption.
- Achieved 17% reduction in delay and 7.46% reduction in power usage compared to traditional designs.
- Strengthened analytical and system-level optimization skills applicable to secure hardware and embedded systems.

Multi-tasking agriculture robot using microcontroller [↗](#)

- Developed an ESP32-based automated agriculture system integrating sensors and motor controllers.
- Implemented wireless communication for remote monitoring and control.
- Designed sensor-driven automation workflows, enhancing embedded system reliability.
- Strengthened knowledge of hardware-software integration and secure system design.

Certificates

- Introduction to Networking - Cisco [↗](#)
- Tata group Cybersecurity analyst job simulation- Tata Forage [↗](#)
- Python 101 for data science- IBM [↗](#)
- SQL and Relational databases- IBM [↗](#)
- Internet of Things- Infosys Springboard [↗](#)
