

# LAKSHMI SHIVANI K

Cybersecurity Engineer

## Contact

- +91 9535463787
- lakshmishivanik.19@gmail.com
- Bengaluru, India

## Education

### REVA University (RACE)

M.Tech. in Cyber Security  
Nov 2025 - Nov 2027

### REVA University

B.E. in CSE (IoT & Cyber Security including  
Blockchain Technology)  
Sep 2022 - Sep 2025

## Skills

### Technical Skills Programming:

Python, Embedded C, Java Security & Analysis:  
Networking Fundamentals, API Security, Security  
Automation, Authentication & Access Control, OSINT  
Attack Surface Analysis, Threat Intelligence, Digital  
Footprint Analysis, Threat Detection & Basic Threat  
Hunting, Incident Investigation & Basic Incident  
Triage, Vulnerability Assessment, OWASP API Top  
10.

### Soft Skills

Analytical Thinking, Problem Solving, Attention to  
Detail, Communication, Team Collaboration, Technical  
Documentation.

### Tools

Nmap, Nikto, Postman, Wazuh, Wireshark,  
Wappalyzer, Arpspoof, Linux & Shell Basics, Git,  
Power BI, AWS Console (Lambda, API Gateway,  
DynamoDB)

## Certificates

- Cyber Security Fundamentals
- Networking Basics
- Python 101 for Data Science

## About Me

Cybersecurity engineering enthusiast with hands-on experience in security automation, API security testing, OSINT-based attack surface analysis, and Python-based security tool development. Skilled in vulnerability assessment, network security concepts, and cybersecurity automation.

## Work Experience

### Machine Learning Intern

#### Psitron Technologies Pvt Ltd

- Contributed to Generative AI projects focused on building scalable solutions.
- Evaluated LLMs to enhance response accuracy and system performance.
- Leveraged AWS services to design and manage backend infrastructure.
- Developed serverless applications using AWS Lambda and API Gateway.

## Projects

Jan 2025 - Jun 2025

### Adversary-Centric Digital Footprint Analyser

#### Personal Project

- Developed a Python-based OSINT framework for analysing organisational attack surface exposure
- Automated collection of subdomains, open ports, leaked credentials, technology stack details, and email patterns
- Designed a weighted risk scoring model to generate composite attack surface risk scores

### ARP Spoofing Detection Tool

#### Personal Project

- Developed a network security tool using Python and Scapy to detect ARP spoofing (MITM attacks).
- Monitored IP-MAC inconsistencies to identify suspicious network activity in real time

### AI Command Line Assistant for Cybersecurity Automation

#### Personal Project

- Built a Python-based automation tool using subprocess and regex for executing security tasks.
- Automated reconnaissance operations including Nmap scanning, WHOIS lookup, ping, and traceroute.

### API Security Assessment Engine (OWASP Top 10)

#### Personal Project

- Conducted API security testing using Postman and Python scripts to identify OWASP vulnerabilities.
- Simulated real-world attack scenarios to detect authentication and access control issues.
