

SAI KRISHNA K M

SOC Analyst

Contact

+91 9141428452

saikrish172003@gmail.com

Bengaluru, India

Education

REVA University (RACE)

M.Tech. in Cyber Security
Nov 2025 - Nov 2027

New Horizon college of Engineering

B.Tech in AIML |CGPA: 8.7

Skills

Cybersecurity & Networking

Web Application Security (OWASP Top 10), Vulnerability Assessment, Network Security Fundamentals, TCP/IP, DNS, Threat Identification, SOC Monitoring, Threat Detection, Network Traffic Analysis, DNS Monitoring, Log Analysis, Vulnerability Assessment

Soft Skills

Leadership Qualities, Communication Skills, Teamwork, Creative Thinking, Team management.

Tools

Nmap, Wireshark, John the ripper, Shodan, suab finder, Netdiscover, Splunk, Dirb, Nessus, Hydra, Wazuh.

Certificates

Python 101 For Data Science -IBM

SQL and Realational Database 101 -IBM

Cisco Introduction to Cybersecurity -CISCO

Cisco Networking Academy program - CISCO

About Me

Aspiring Cybersecurity and SOC Analyst with hands-on experience in network security monitoring, anomaly detection, and threat analysis using AI-based techniques. Skilled in tools such as Wireshark, Splunk, Nmap, Wazuh, and Nessus for identifying suspicious activities and security threats. Developed projects in Network Anomaly Detection, DNS Traffic Monitoring, and AI-powered Log Analysis using Machine Learning algorithms like K-Means and Isolation Forest. Passionate about cybersecurity, continuous learning, and building efficient threat detection solutions.

Work Experience

Hindustan Aeronautics Limited (HAL)

Analyzed flight control and sensor data to support system performance evaluation and stability analysis during internship at Hindustan Aeronautics Limited. Assisted in aerospace data preprocessing, validation, and reliability improvement while gaining hands-on exposure to avionics systems and flight control architectures

Projects

The AI Automation & Log Analysis Assistant

Developed an AI-powered Log Analysis Assistant that automates log monitoring, threat detection, alert generation, and security reporting using AI and rule-based cybersecurity analysis techniques

Network Anomaly Detection for Cyber Threat Identification

Using Artificial Intelligence

Developed an AI-based Network Anomaly Detection System using Wireshark, K-Means Clustering, and Isolation Forest to analyze real-time network traffic and detect suspicious activities, traffic anomalies, and protocol misuse patterns.

AI-Powered Threat Intelligence Feed Aggregator

Developed an AI-powered Threat Intelligence Feed Aggregator to collect, analyze, and summarize cyber threat data from multiple sources using automated IOC extraction, LLM-based threat summarization, and a real-time Gradio monitoring dashboard.

DNS Traffic Monitoring & Suspicious Domain Detection Using

Wireshark

Implemented a DNS Traffic Monitoring and Suspicious Domain Detection system using Wireshark to analyze live DNS traffic and detect phishing domains, DNS tunneling, abnormal query behavior, and C2 communication attempts.
