

SREEDIYA S

Cybersecurity Analyst

Contact

+91 8015201899

sreediyasanjith26@gmail.com

Bengaluru, India

Education

REVA University (RACE)

M.Tech. in Cyber Security
Nov 2025 - Nov 2027

GEC Kushalnagar

B.E. in Electronics and Communication | CGPA: 9.2
Dec 2021 - June 2025

Skills

Technical Skills

Networking Fundamentals, Python programming, SQL, Data Visualization, Digital Electronics, IOT, HTML, Understanding on Web Security Basics, Networking, GRC Fundamentals, HTTP Security Header

Soft Skills

Communication Skills, Team work, Adaptability, Emotional Intelligence, Presentation Skills

Tools

Burp Suite, Nmap, Wireshark, Nikto, John The Ripper, Cisco Packet Tracer, Wazuh, Splunk, Power BI, VS Code.

Certificates

Networking Basics- Cisco Networking Academy

Python 101 for Data Science- IBM

SQL and Relational Databases 101

About Me

Cybersecurity Enthusiast with foundational knowledge in vulnerability analysis, HTTP security assessment, and network monitoring fundamentals. Passionate about cybersecurity technologies, threat analysis, and secure systems with a strong willingness to learn and develop practical security skills

Work Experience

IOT and Embedded Systems Intern

Contriver, Mysore

Assisted in IoT-based embedded system development using Arduino, including hardware validation, debugging, firmware testing, and technical documentation. Applied basic cybersecurity practices during IoT device testing with network behavior monitoring and vulnerability awareness..

Projects

Banking Testing Security Operation

Personal Project

Developed a Selenium-based automation framework for banking operations validation and basic security testing, including authentication checks and attack simulation. Automated workflow testing, evidence capture, and timestamp-based PDF report generation for reliable test documentation

HTTP Security Header Analyser

Personal Project

Developed a Python-based tool to analyze HTTP security headers and identify web security misconfigurations aligned with OWASP best practices. Automated detection of missing security headers and generated structured reports with remediation guidance.

Brute Force Detection System

Personal Project

This project is a Python-based security system designed to simulate, visualize, and block brute-force attacks in real-time using an adaptive threshold mechanism. It proactively traps malicious actors using integrated honeypot credentials and automatically mitigates threats by instantly blocking offending IP addresses.

Underground Water Channel Detection Robot

Personal Project

Developed an Arduino-based mobile robot using Doppler RADAR technology to detect underground water channels through real-time signal processing and environmental noise filtering. Integrated sensor data with microcontroller-based autonomous navigation for non-invasive detection in agriculture and disaster management applications.
